Abstract (en)

[origin: WO9739496A1] An electrical connector and electrical connecting component (1) for connecting at least one electric lead (19) to an electric circuit unit (4), especially a printed circuit board, in which the connecting component (1) is designed in such a way that, after the electric circuit unit (4) has been fitted in the electrical connector, it automatically electrically contacts the electric circuit unit (4). In particular, the electrical connecting component (1) takes the form of a terminal, where one end (10) thereof ensures a spring-loaded contact with the electric circuit unit (4).
