Abstract (en)

[origin: WO9742750A1] A method and an arrangement for increasing onhook voltage, the arrangement being used in a subscriber interface unit, the subscriber loop (B) comprising lines (a, b), and at least one terminal (3), and the subscriber interface unit comprising adapter means (1) for adapting the lines (a, b) for the subscriber interface unit, the arrangement comprising a battery voltage source (4) for generating a battery voltage (Vbat). The arrangement comprises an additional voltage source (2) connected to the battery voltage source (4) for adding an additional voltage (Vad) to the battery voltage (Vbat) in an onhook situation.
