Abstract (en)
[origin: EP0894457A2] The seat units (1) each have a seat (2) and a seat holder (15) locally fixed on a platform structure and having a swivel bearing (16) with vertical swivel axis (A) so that the seat can be set in different viewing directions. The seat holder has stops to restrict the adjustment area of the seat. The axial bearing of the swivel bearing is formed as a pressure load bearing remote from the axis and having a first seat bearing part on the platform side enclosing the swivel axis at a radial spacing, and a second bearing part on the seat supporting the first bearing.
