Abstract (en)

[origin: DE19733470C1] The profile has a longitudinal middle panel with an angled profile strip along at least one edge and within at least one top sill. The middle panel (3) and the profiled strips (2,4) can be made as rigidly connected sections with the middle panel having a curvature matched by the upper sill (5). At least one profile can be formed as a section extending the full length of the profile, in one piece. The sill conforms with the shape of the profile. Each edge profile has a connecting flange (11-18) extending perpendicular to the edge profile flange and rigidly fixed to the middle panel.
