Abstract (en)
[origin: EP0894914A2] Insulating barrier plates (1) are mounted between each two adjoining rafters. Holders (3) for the barrier plates are fixedly connected to the edges of the plates which run parallel to the rafters. The holders are fixed on the rafters and have associated support elements (6) which form the base for the roof girder rails (7). Positive locking connections are provided between the support elements and girder rails (7) so that bending tabs associated with the support elements engage in the recesses of the rails. The tabs point in the direction of the ridge.
