Abstract (en)

[origin: EP0894969A2] The arrangement includes a magnetic field generation arrangement (61, 62) with at least one coil, such that, a timewise changing magnetic field is induced in the liquid or gaseous fuel. The coil surrounds a container holding the liquid or gaseous fuel. The arrangement comprises a control system (20) which is functionally connected with the magnetic field generation arrangement. The control system controls the temporal behaviour of the magnetic field depending on at least one parameter. The control arrangement includes an input device (25', 25"), by which the at least one parameter can be adjusted to the fluid to be respectively treated.
