Abstract (en)
[origin: EP0895214A2] The top edge of the holder units (2,3) in the form of boards each consists of a profiled strip (8,9). The profiled strip of one holder unit (2), facing the other holder unit (3) has a groove (11) open at least towards one end surface of the strip, and running the entire length (10) of the strip. The groove has a cylindrical inner wall side (12) extending over more than 180 degrees. The strip on the other holder unit has a bar (14) on an arm (13) running the entire length of the strip and swivel fitting into the groove. The arm is narrower than the opening of the groove. A fastening (15,16) on the bar fixes the reciprocal longitudinal position of the profiled strips.
