Abstract (en)

[origin: WO9739701A1] A package is disclosed for folding intraocular implants having flexible optics. This package (70) comprises a base (31), supporting means (30) for folding the optical portion (24) comprising a folding edge (34) substantially parallel to the base, capable of coming into contact with the lower surface of the optical portion (24) and forming a longitudinal axis (32) enabling the folding of the implant along the said folding axis (28) on either side of the said folding edge (34) and positioning means (50; 56; 60) cooperating with at least part of the peripheral zone (26) of the optical portion (24) to support the implant and to maintain the folding axis (28) of the implant in the same vertical plane as the longitudinal axis (32) of the said supporting and folding means (30).
