Abstract (en)

[origin: WO9740551A1] The invention concerns an insulation body (1) on the upper side of which several electrical contact tongues (2) are arranged next to each other in a plane and oriented in the direction of the connection. To protect the contact surface, the plug-side end of the contact tongues (2) is in each case formed as a curved sliding surface (3) for the corresponding contact spring. The insulating body (1) is formed on its plug side with a step-formed offset (4), the transition area between the different levels being formed in the area of the contact tongues (2) to fit their curved sliding surface (3), thus, as a rounded step (5).
