Abstract (en)
[origin: EP0895814A2] The nozzle comprises a hollow body (1) with a center flow axis (19) of a fluid supplying said nozzle. In the hollow body (1) there is housed in a freely rotatable manner a rotor (14) having an outlet through-bore (17) with a rear base (21) arranged eccentrically with respect to said center axis, and an axis (18) that is inclined transversally with respect to said center axis. The fluid supplied to the inlet (3) of the hollow body (1) is ejected from the through-hole (17) in the form of an inclined jet whose reaction thrust produces a torque that brings about the rotation of the rotor (14). <IMAGE>
