Abstract (en)
The present invention relates to a filing equipment comprising two mount-portions (1) being capable of opening and shutting at opposite sides across the connecting portion, a lingulate piece (2) partially fixed on an inner surface of one of said mount-portions and a clip put papers (3) and said lingulate piece, and used by catching an end portion of paper and a free-end portion of said lingulate piece with said clip. The filing equipment of the present invention can temporally catch the documents and can keep the documents in a certain order, and from which the documents can be easily detached. <IMAGE>
