Abstract (en)

[origin: DE19613691A1] The invention concerns a drug containing as its active constituent a substance which inhibits the action of TGF beta on tumour cells of epithelial origin for the treatment of epithelial, invasive tumours characterized by a reversible transition of the cells from an epithelial, non-invasive state to a fibroblastic, invasive state. The drug contains a TGF beta inhibitor, preferably in combination with a Ras inhibitor. The invention also concerns a method of screening substances for the treatment of epithelial, invasive tumours.
