Abstract (en)
[origin: EP0896805A2] The one-piece hook holder body (1), held in place by adhesive strip(s) (3), has a one-piece base plate with a structured shape (222) to take a fitted spring (21) together with a projection at the collar zone (221). Guides are in the hook body (1) to take the projection (222) of the structured shape. The hook body (1) and the base plate are durably bonded together. In the basic position, the hook body (1) is anchored to the base plate and covers the adhesive strip(s) (3) and the non-adhesive strip grip tab. The hook body (1) is moved parallel to the base plate to break the grip for sliding parallel to the base plate. The hook body (1) can be turned over the spring (21) up to 90 degrees for access to the strip grip tab.
