Abstract (en)
[origin: EP0896807A2] The holder comprises a hook body and a baseplate, both in one piece, the plate having an adhesive strip freed by pulling and with a lug protruding beyond it. The body covers both the plate and the protruding lug. Four or more widened portions in opposite pairs are provided on the plate, and extend beyond it at the sides. These work in guides (14) in the body (1), so that in the basic position by the body is secured on the plate and covers it and the lug, whereas on release it lifts clear to allow access to the lug. The body and plate are permanently joined together. POLYMERS - Polyethylene terephthalate or polystyrol can be used as material for the body and/or plate.
