Abstract (en)
[origin: EP0896861A2] The invention relates to an arrangement in connection with a tool, to be used for instance in an angle grinder. The arrangement comprises a spindle (2) rotated by a drive unit, a standard wheel (1) being arranged to the spindle by means of a spindle nut (4). To the spindle (2) is also arranged a separate grinding member smaller than the standard wheel (1), the grinding member having a grinding surface on its outer periphery. The arrangement can be used for instance in plumbing: the standard wheel (1) can be used for cutting the pipes and the grinding member for grinding the flash from the cutting point. <IMAGE>
