Abstract (en)

The sack, for the transport of loose materials, is of a woven and/or film material in two outer layers and an intermediate layer. The two outer layers (1,2) are bonded together by one or more connectors (5) passing through the intermediate layer (3). The outer layers are conductive, such as in a woven material of low pressure polyethylene or polypropylene. The conductivity is through woven metal filaments or a metal coating, or weaving in carbonised polyolefin filaments. The centre layer is of extruded polypropylene.

Abstract (de)

Bei einem Transportsack aus Gewebe- und/oder Folienmaterial, wobei das Material aus zwei leitfähigen Außenschichten und einer Zwischenschicht besteht, wird vorgeschlagen, daß die beiden Außenschichten (1,2) durch ein oder mehrere die Zwischenschicht (3) durchragende Verbindungsleiter (5) verbunden sind. <IMAGE>
