Abstract (en)  
[origin: EP0897048A2] Each panel part (1,2) is formed from a lining component (3) covering the inner face of the arch and cladding components (4) covering the installation seam. The cladding components are joined to the lining component preferably by a tongue and groove arrangement (5,6). The contacting abutment surfaces (7) of the lining component comprise two part surfaces (8,9). The contacting abutment surfaces of the lining component comprise two part surfaces running vertically to the frame plane and extending over the lining panel width, of which the first, evolving from a corner edge (10) of the corner connection, extends over a part of the dimension of the lining component parallel to the frame plane. The connecting second part surface encloses with the first part surface and angle deviating from 180 degrees.
