Abstract (en)
[origin: WO9741964A1] A device for dispensing a fluid material from a container, including a conventional pump or valve comprising a fixed body in which an actuating rod (11) is movable between an inoperative position and a dispensing position, said rod (11) being hollow so that it defines a discharge channel (15) providing fluid communication between at least one part of said fluid material and outlets (12) on the rod; and a dispensing member (3) secured to said body and provided with a fixed dispensing outlet (20) and means (31, 34) for providing fluid communication between said movable outlets (12) and the fixed dispensing outlet (20), at least in the dispensing position, as well as a push button (13) mounted on the actuating rod (11) for sealing the top end of the discharge channel (15).
