Abstract (en)
[origin: DE19618339A1] The invention relates to sail battens comprising tubular batten rods (1) which meet each other in a loose manner and in which tubular inner rods (2) of the same length are arranged to span tubular inner rod joining areas and meet each other in a loose manner. The mutual transverse play (5) of said inner rods determines the arch. To this end an internal support line holds together the arched section and the longer fixed rear rod.
