Abstract (en)

[origin: EP0898031A2] A novel floor comprises an assembly of floorboards of wood or wooden material. These have one or more elastic expansion strips. These (4, 5) are let into the boards, and extend through the entire length and thickness of each board. Preferably there are several, parallel, spaced strips. Intervening strips of the board material are included. The expansion strips are plastic, especially of neoprene, or alternatively of cork. The strips are located centrally, and if plastic, are coloured.
