Abstract (en)
[origin: EP0898336A1] A lever-type electrical connector has a moving support plate 15 to prevent bending of protruding male terminals of a male connector housing 11. The support plate 15 has external flanges 20,42 to prevent inward movement of cam pins 18,41 due to the application of external force to the base of the support plate 15. The plate 15 may have a continuous upstanding wall 17 to further resist distortion due to external force.
