Abstract (en)
[origin: EP0898338A2] The plug or socket has an M-shaped contact member with two side support sections and a contact section between the latter which is connected to the them by two connection sections. By putting together two parts of the plug or socket housing, the contact member is deformed such that at least one of the connection sections and/or support sections make contact with contact sections in the screening of a cable inserted in the housing.
