Abstract (en)  
[origin: DE19643607A1] The switch occupies a housing consisting of a rear wall (25) and a frontal part (26). The connection rails (20,21) of the contact system (11) feature transverse projections or webs (40,46) sized and shaped for abutment against surfaces (41,47) on the rear wall. Each rail is inserted through an opening (27,28) from the front until the projections encounter the abutment surfaces. The upper rail (20) is retained by a pressure piece (43) with fixing screws (44) through one end (42) of an arc horn (36). The lower rail (21) is held by the end (51) of a projection from the frontal part.
