Abstract (en)
[origin: EP0899231A1] The brake catching device consists of a cantilever (1) round a guide rail (8) for a lift cabin, running transversely to the guide rail. There are active (6) and passive (7) brake shoes either side of the guide rail. The active one is supported by an eccentric cam (5) fixed to a rolling-out disk and rotates on a journal (2). The disk and cam form a one-piece operating element (21).
