Abstract (en)

The opening surface (17) of the flow rectifier(18) is larger than the entry surface (19) of the spin producer(100). The ratio of the opening surface to the entry surface is greater than or equal to 3. The flow rectifier comprises a holed plate hood (12), on which are end flanges (11). The spin producer comprises at least two hollow, conical part bodies inter-engaged in the flow direction. The adjacent walls of the part bodies in their longitudinal extent from tangential channels for a combustion airflow and in the conical hollow space formed by the part bodies is at least one fuel nozzle.

Abstract (de)

Bei einer Brennervorrichtung, umfassend einen Drallerzeuger (9,100) für einen Verbrennungsluftstrom (1,2,115) und eine stromabwärts des Drallerzeugers (9,100) angeordnete Brennkammer (15) ist stromaufwärts des Drallerzeugers (9,100) ein Strömungsgleichrichter (18) zur Gleichrichtung der Zustromung zum Drallerzeuger (9,100) angeordnet. <IMAGE>
