Abstract (en)

[origin: EP0899529A2] The drive device is in permanent contact with sludge and dispersions. The turning device (8) is moved over a base (6). The movement direction and speed of the turning device can be controlled or regulated on stotastically determined or predetermined paths. The distribution tool in the form of a harrow or plough is fixed on the frame. As a hoe or conveyor worm it is motor-driven. The work speed and direction of the distribution tool can be regulated or controlled. The path control of the turning device is effected with the aid of a satellite navigation apparatus.
