Abstract (en)

[origin: EP0899706A2] The base plate (3) has at least one, preferably two, pins (5) fitting into matching cavities in a counter-plate (6) so that they are manually inextricable. The pins may have a serrated outer surface (21) which hooks into the counter-plate's corresponding cavities (18) that may be formed by elastic tongues (16). The front edges of the elastic tongues have wedge-shaped cross-sections. The serrated structure of the pins is formed by annular shoulder surfaces (23,22) parallel with and on the base plate. The tops of the pins may also have recesses (19) for a tool. The bottoms of the pins can have a tapered part (20) acting as nominal fracture point.
