Abstract (en)
[origin: EP0951855A2] The dispenser for soap powder, into an outstretched hand, has a dispensing lever (4) with one or more closure pistons (13) passing through spreader holes (6) in the dispenser (1) within the container (2). The closure pistons (13) have outer dimensions which are sufficiently smaller than the inner dia. of the spreader holes (6) to form a gap where the soap powder dwells through natural friction between the particles and can be moved onwards by the movement of the pistons (13) during dispensing.
