Abstract (en)

[origin: WO9740861A1] The invention relates to biological material which is free of certain pathogens, in particular of viral pathogens. It also relates to a process for depleting a biological material of viral and molecular pathogens, at least one ligand or receptor which reacts with a receptor or ligand of the particular pathogen being added to said biological material thereby producing a ligand/receptor complex, and separation of the ligand/receptor complex by a process which separates the complexed pathogen partially or completely from biological material. The invention also relates to the use of said process to produce said biological material.
