Abstract (en)

[origin: DE19605548A1] The invention concerns a composition for the transfection of higher eucaryotic cells. A complex of a nucleic acid to be expressed in the cell and a cationic lipid present in a suboptimal concentration for transfection contains one or a plurality of membrane-active acid peptides and optionally helper lipid(s). The ratio of the total number of positive charges to the total number of negative charges in the composition is between approximately 0 and approximately 3.
