Abstract (en)

[origin: WO9741289A1] The invention relates to a device (100) for liquid treatment of a textile web. Said device comprises at least one driven winding roller (10, 20) on which the web (11) can be wound, and a tank (13, 14) which is below the winding roller (10, 20), extends over the length thereof and can be filled with treatment liquid. At least one turning roller (15, 16) for the fabric web (11) is arranged in said tank. Moreover, a guide roller (50, 50') extending parallel to the axis of the winding roller (10, 20) over the width of the fabric web (11) and resting on the lap (10') forming on the winding roller (10) is provided for said fabric web (11) and has openings (60, 60', 60'') on its periphery (55') which is otherwise cylindrical. Said openings are arranged avoiding closed zones extending in the peripheral direction and are distributed equally across the periphery (55').
