Abstract (en)
A method of folding packing blanks (3) whereby each blank (3) is fed into a respective packing pocket (29) in a given prepacking configuration; each blank (3) being fed along an input portion (P1) of a folding path (P) to be weakened along respective preformed bend lines (4-8), and being associated with a respective packing pocket (29) at a transfer station (S1); and a number of spindles (43) being fed in time with the packing pockets (29) through an insertion and parting station (S2) located along an output portion (P2) of the folding path (P) to intercept and insert the blanks (3) gradually inside the packing pockets (29), and to finish-fold the blanks into the prepacking configuration. <IMAGE>
