Abstract (en)
[origin: EP0900891A1] Insulating covering in metal sheet material comprising at least two building panels (1,2), each building panel comprising a first (31,32) and a second metal layer (41,42), with a layer of insulating material (51,52) in between, whereby a first building (1,2) panel is suitable for forming a covering by butting one of its sides up against a side of a second building panel (2,1), whereby the first metal layer (31) of the first building panel (1) is folded over close to the relative side, thereby creating a projecting tongue, which coacts with a recess formed on the relative side of the first metal layer (32) of the second building panel (2), and whereby upright edges are provided on the edges of the two metal layers (41,42) of the building panels, which upright edges can be coupled together with means of fixing and in which these means of fixing have been provided in a way by which they are thermally insulated from the unfolded parts of the first metal layers (31,32). <IMAGE>
