Abstract (en)
[origin: WO9744150A1] The invention relates to a continuous casting machine with an ingot mould (8) which can be inserted into a frame-shaped lifting platform (6), a roller apron (9) adjoining the ingot mould and a mould oscillation facility (3) supporting and moving the lifting platform. A first roller apron segment (12) has been integrated into a downstream roller apron segment (13) in a detachable manner and a die stirrer (20) is supported by a second roller apron segment to keep format change times low by forming a format related machine head.
