Abstract (en)  
[origin: DE19703080A1] The invention relates to a component (23), characterized in that it comprises a plurality of layers (32, 33) functional planes which are built up on each other by micro-electrodeposition. At least one coding mark (60), which is optically readable from the exterior, and is produced during electrodeposition is provided on at least one of the functional planes forming an outer limit of the component (23). The component (23) is suitable as a perforated disk, particularly for use in injection valves, ink jet printers, for spraying or injecting liquids, or for pulverizing medicines.
