Abstract (en)

[origin: WO9746926A2] In the invention of this application, an operator can easily recognize the operating state of a plate material processing machine, such as the position state of a positioning pin used in positioning of a work W in a predetermined position and the operating state of a work clamping device for gripping the work W and the like, by displaying this operating state of the plate material processing machine in the form of an image of the plate material processing machine itself intuitively easy even for a beginner to understand on the display screen of a display unit. The present invention has a skill mode selecting key for selectively switching an expert mode requiring a detailed operating procedure for an expert and a beginner mode requiring a simple operating procedure for a beginner. These two modes can be selectively switched in accordance with a skill degree of the operator.
