Abstract (en)

[origin: EP0903219A2] A cushioning conversion machine system includes a stock supply assembly, a conversion assembly for converting the stock material into a cushioning product and providing it through a machine outlet, and a cushioning product transferring system including first and second series of drive elements spaced to form therebetween a passageway for the cushioning product and to effect the transfer of the cushioning product along the passageway, each of the first and second series of drive elements being adjustably interconnected for varying the path of the passageway.
