Abstract (en)  
A refuse container (3) is provided with compacting means (27) to compact refuse. The container has a funnel (17) being present below the entry (11) and debouch into the press room. The compacting means comprise a movable ram (31) which compacts the refuse below the funnel. The funnel is partly formed by a partition (21) which acts as a breaking beam and is present between the entry and the storage room. The partition is hinged (23) with its upper side to the housing (9) of the container. The compacting plate (37) of the ram is hinged (39) with its upper side to the frame of the ram. <IMAGE>
