Abstract (en)
[origin: EP0903534A2] The lamp has a base body (10) with longitudinal axis (11), and at least one light source (12) fitted to the base body. The base body, in the form of a column or rod, has at least one turning joint (16,18,20) with a turning axis (22), about which at least two sectors (26,28) of the base body can be turned relative to each other. The turning axis of at least one joint may be tilted at a preset angle relative to the longitudinal axis of the body. This angle may be between 0 and 90 degrees , preferably 45 degrees .
