Abstract (en)

[origin: EP0903550A1] A device for rapid cooling of an object, e.g. a bottle (44), in a refrigerator comprises a first bag (14) arranged at a refrigerated surface (12) in the refrigerator, a second bag (20) arranged below the first bag, a pipe (22) through which a liquid can move between the bags, a means (24) for compressing the second bag (20), so that the liquid flows up to the first bag (14), and a holder (32) for bringing the object (44) into contact with the first bag (14), which by that is brought into contact with the refrigerated surface (12), so that heat can be conducted from the object (44) through the liquid in the first bag (14) to the refrigerated surface (12). <IMAGE>
