Abstract (en)

[origin: EP0903710A2] The programming system uses a microprocessor-assisted programming device (7) which is coupled via a data link (8) to a computer (2) for loading programming software. The software is loaded from a data disc (1) in the working memory of the programming device. The programming device is coupled via a second data link (10) to the remote-control (9) which includes a microcontroller for loading the remote-control programme. The programme is loaded in the memory of the remote control using the programming software and instructions which are entered via the input keyboard (16) of the programming device.
