Abstract (en)

Device for joining two modular electrical units (1, 12) intended to be mounted with two respective lateral faces (21, 22) juxtaposed, comprising at least two pairs of joining elements (40, 41) each element being located on one face, other than the face to be juxtaposed, of one of the units (1, 12) in a position in which the joining element (40, 41) of one of the units is adjacent to the joining element of the other unit. A retaining element (42, 43) completes the joining device by fitting around both joining elements (40, 41) of the pair and holding them firmly together. The device is simple in its structure, easy to manufacture, simple to assemble and difficult to open. <IMAGE>
