Abstract (en)
[origin: US5877711A] A method for encoding an input data stream of source symbols to produce an output sequence of pointers is disclosed. An initial part of the input data stream is encoded as a LITERAL-POINTER by a compressor. A LITERAL-POINTER includes at least one data byte from the data stream. A subsequent part of the input data stream is encoded as a COPY-POINTER. The COPY-POINTER includes a count and a displacement pointing to a history-buffer within the compressor. All succeeding data bytes from the input data stream are encoded as LITERAL-POINTERS and COPY-POINTERS in an alternating fashion, such that an encoded output sequence output by the compressor includes a string of pointers alternating between LITERAL-POINTERS and COPY-POINTERS.
