Abstract (en)
[origin: WO9745271A1] The equipment (1) enables remote document reading, filling and writing, being commanded from a remote terminal (10) provided with a screen (11) and a keyboard (12). This equipment (1) comprises a document internal circuit (4) supplied from a tray (3), on which are set an optical read head (7) and a print head (8) associated to operate on the same document being processed. The read head (7) enables the progressive transmission of the document image on the terminal screen (11). This terminal keyboard (12) provides remote control for moving the document forward and backward in the equipment (1), writing a text and/or signing the document via the print head (8), and ejecting the processed document into a supply tray (5), the signature possibly being accompanied by a control code. The invention is useful in remote signing in commercial and banking activities, remote filling of administrative forms, teleworking.
