Abstract (en)

[origin: WO9801351A1] The invention discloses a package in sheet material, such as cardboard or the like with a lid capable of being nested onto a separate lid body. It is made from a single blank of the said material, cut out and grooved to provide an opening means which defines in the package - after the latter has been initially opened - a body (30) and a covering lid (31) and at the package portion constituting the said body (30) are associated means (36, 37) for deforming it so as to reduce the perimeter of its opening (35) so that it can be closed by the covering lid (31) being nested onto it.
