Abstract (en)

[origin: WO9747813A1] The invention concerns a device, fitted to points, which presses one tongue (28) against one stock rail (4) while at the same time pulling the other tongue (29) off the opposite stock rail (3). The operability of the device is improved by virtue of the fact that a moving device with at least four adjustable vertical spring assemblies (8, 9, 12, 13) is located between the stock rails/tongues of the points.
