Abstract (en)

[origin: WO9745692A1] The invention discloses a shooting practice system, comprising at least one target (13) and at least one gun (11) equipped with means for emitting a light beam (17) along the shooting axis, system comprising a processing unit (14) delivering an analysis of each shot, based on a signal (18) reflected by the said target (13) and received by the sensor fitted to the gun (11) and a permanent evaluation of the trajectory of each of the said targets (13). The gun equipment can be movable and is designed to be easily mounted and dismounted on a standard gun. It can be designed to simulate small shot speed and/or dispersion. The invention also discloses such equipment, a target adapted to the system and a corresponding method.
