Abstract (en)

[origin: EP0904809A1] A pivot binding between a sports appliance and a standing surface which slides with the foot movements, has at least two transfer arms (11,12) at a linkage system (14,15) at the sports appliance (2). The arms are spaced from the linkage (14,15) swing axes (18,20) in one or more directions in relation to each other and to the vertical planes (9) on the end zones away from the appliance (2) along the longitudinal directions (66) of the foot, together with the linkages (13,16) fitted to the standing surface (7). When assembled, the linkages (14,15) for the transfer arms (11,12) are angled in relation to the standing surface (7) in opposite directions along the longitudinal line (66).
