Abstract (en)
[origin: EP0904851A2] The door panel (5) and the ornamental profiles (17) fastened to it, are powder-coated continuously and with the same color. The profiles have at least localized electrical conductivity so that they are completely powder-coated. The profiles are fastened to the door panel via metal anchors (19), which also form an electrically conductive connection to the metal plate (14) in the door panel. The profiles contain plastic-metal powder mix, e.g. aluminum or another non-iron metal.
