Abstract (en)

[origin: EP0905003A1] The method of conflict resolution operates in five stages. The existence of conflicts is determined on the basis of the network, planned journeys and restrictions. This information is displayed on a screen, and an object selected. A resolution method is then selected from a known list of resolution methods, and the response of the system determined as a function of the resolution method and the selected object. The response is shown as a time-distance graph.
